

ABSTRACT

The present invention provides an adhesive skin patch that permits excellent and prolonged percutaneous absorption of tulobuterol and that can be stably applied to the skin for a long period of time with less skin irritation. The adhesive skin patch comprises a base material and a medicated layer provided on one surface of the base material. The medicated layer contains 1 to 30% by weight of a solvent, 40 to 98% by weight of a pressure-sensitive adhesive, and tulobuterol. The solvent contains an aliphatic alcohol having a branched-chain structure or a double bond in its C8 to C30 carbon chain. The pressure-sensitive adhesive is a copolymer obtained by copolymerizing monomers containing 70% by weight or more of an alkyl(meth)acrylate whose alkyl group has 6 to 20 carbon atoms.
